MEMORANDUM

SUBJECT: ROCK ISLAND COUNTY -John Deere Foundry
(Silvis) Old Oil Lagoon Abandonment

TO: DWPC/FOS and RU

FROM: James E. KammueLLer DWPC-FOS, Region 5

DATE: November 13, 1981

On the above date I attended a meeting with the attached list of John Deere personnel. Deere requested my attendance to review and discuss the attached oil lagoon abandonment plan. The following are some items discussed not specifically covered in their plan:

1. Sludge removed from the lagoons, and the tank car/oil separator ahead of the #2 lagoon, will be dried then tested for contaminants and disposed of under an EPA Permit. They will construct a drying bed(s) for this purpose with supernatant discharge either to their 003 lagoon or to a sump or one of the old oil lagoons then to 003.
2. What I had been calling the "second" of the western two oil lagoons is not considered a lagoon by Deere, rather just a "depression" or "wide stream" which receives effluent from the first lagoon. Deere did agree to sample the contents and sludge of this "depression" and follow the same cleanup methods used for the other lagoons if necessitated by the test results.
3. This abandonment work will effectively shut off Chrome Crankshafts wastewater discharge. However, there has been little opposition or comment to date from Chrome Crankshaft.
4. Abandonment work is to begin November 16, 1981.

The above is to document this meeting.
